GPS Download Instructions

The document near the GPS unit informs you how to set up the GPS. Here are the instructions to pull over the data.

1) Login/Password: Call SSEC

2) Click on the GPLoad program on the desktop

3) Select "Connect" on the lower right of the GPLoad program window.

4) Select yesterday's file and click "Rename"
    a. Rename the files to bagoDDD, where DDD is the PREVIOUS day's julian date

5) Reclick the recently renamed file and click "Add"

6) Click the "Transfer" button on the right

7) Close the program, and remove the green key and yellow serial cable

8) Connect laptop to an active Ethernet cable

9) Open a command window like you do on helium.
    a. Type C:\Putty\pscp bagoDDD* aeri@10.0.0.1:/home/aeri/data/memphis/gps
        i. This transfers the gps data over to the yak computer
