

TAVE Data XCDROAST Instructions

- 1) Go to yak, type xcdroast at a terminal prompt.
 - a. It will ask for root password, ask around if you do not know it
- 2) Select “Create CD” and then “Master Tracks”
- 3) Within each of the following directories: aeri, ceil, sondes, surface, and gps, drag and drop files stamped from each of the 2 previous days and the current day over to the window on the left.
 - a. Simply dragging entire directories will fill up the CD before you are done with all of them
 - b. Select “Add to root directory of CD”
- 4) Select the tab on the right “Create session/image”
- 5) Select “Master to image file”, “Continue anyway”, and “OK”
- 6) Then click the “Write tracks” button on the left side.
- 7) Select “track-01.iso” and then select “Add” at the bottom.
- 8) CD should be done burning shortly.
