

# "Two Decades of Down Under Collaboration - Where to Next ?"

by

Mervyn J Lynch

Remote Sensing and Satellite Research Group  
Department of Applied Physics  
Curtin University of Technology  
Perth, Western Australia, Australia  
[m.lynch@curtin.edu.au](mailto:m.lynch@curtin.edu.au)

# Acknowledge Interactions with CIMSS

- CIMSS-Curtin MOU since 1988 - 17 years
- MOU covers graduate students, staff and cooperative research
- Curtin people who have been beneficiaries:-  
Liam Gumley, Paul van Delst, Jason Li, Mark Gray, Brian Osborne, Jim Davies, Peter Fearn, Helen Chedzey, Leon Majewski, Brendon McAtee, Mark Broomhall, Brendan McGann, Brian White, Merv Lynch
- WASTAC – Western Australian Satellite Technology and Applications Consortium (1987)

# CIMSS / SSEC – Curtin

## Interactions

- 1978 Bill and Marcia Smith and (small) family visit Perth
- 1981 first “experiment”: NOAA ERL (Ed Westwater), Bill Smith /Tony Schreiner (SSEC), Merv Lynch (Curtin)
- 1981 met Paul Menzel and Nancy Jesse
- Paul and Nancy visit Perth 1983 on a Curtin Haydn Williams Fellowship
- Multiple visits to Australia by Paul and Nancy
- Visits to Curtin also by Ralph and Paulette Dedecker, Bob Fox, Verner Soumi, Liam Gumley, Bill Hibbard

# CIMSS / SSEC – Curtin

## Interactions

- Remote sensing research with Paul Menzel and Don Wylie (Liam Gumley, Jason Li, Mark Gray, Helen Chedzey)
- Advanced sensors with Bill Smith, Hank Revercomb and Bob Knuteson – HIS, AERI, MAERI field experiments, cruises (Nick Bower, Paul van Delst, Brian Osborne)
- CIMSS Outreach - ITSC series editor (with Paul Menzel)
- MODIS science with Paul Menzel and his team - Liam Gumley, Kathy Strabala, Chris Moeller... (Leon Majewski, Brendon McAtee, Mark Broomhall )

# CIMSS / SSEC – Curtin Interactions

- MODIS - direct broadcast facilities
- MODIS Workshops and in Perth (Liam Gumley)
- Remote Sensing course teaching and software developments - Hydra (Paul Menzel,..)
- Bob Fox – MCIDAS (Frank Yu)
- Sanjay Limaya GIFTS Outreach project
- Alan Huang – radiative transfer (Jim Davies)

# Centre Support

- Bob Fox, John Roberts, Sally Loy, Mike Dean, Terri Gregory, Jean Phillips, Rose Pertzborn, Dee Wade

# CIMSS - Reflections

- Much in the way of advances in instrumentation and science has been achieved
- Many challenges remain for the future – new products; high spatial; high spectral; atmospheric chemistry; aerosol physical properties; observations, models and data assimilation
- Service the users' needs

# What do coupled ocean – atmosphere models require?

**Neville Smith states GODAE requires:**

- validated infrared SSTs for clear sky regions
- validated microwave derived SSTs for cloudy regions
- diurnal heating corrected SSTs
- a diurnally corrected merged IR / MW product

**This product doesn't exist for the Indian Ocean!**

**Ceased production it for the Asian region**

**(Kawamura)!**

# Characterizing Sea Surface Temperature

SST is a difficult parameter to define exactly because the upper ocean (~10 m) has a complex and variable vertical temperature structure that is related to ocean turbulence and the air-sea fluxes of heat, moisture and momentum.

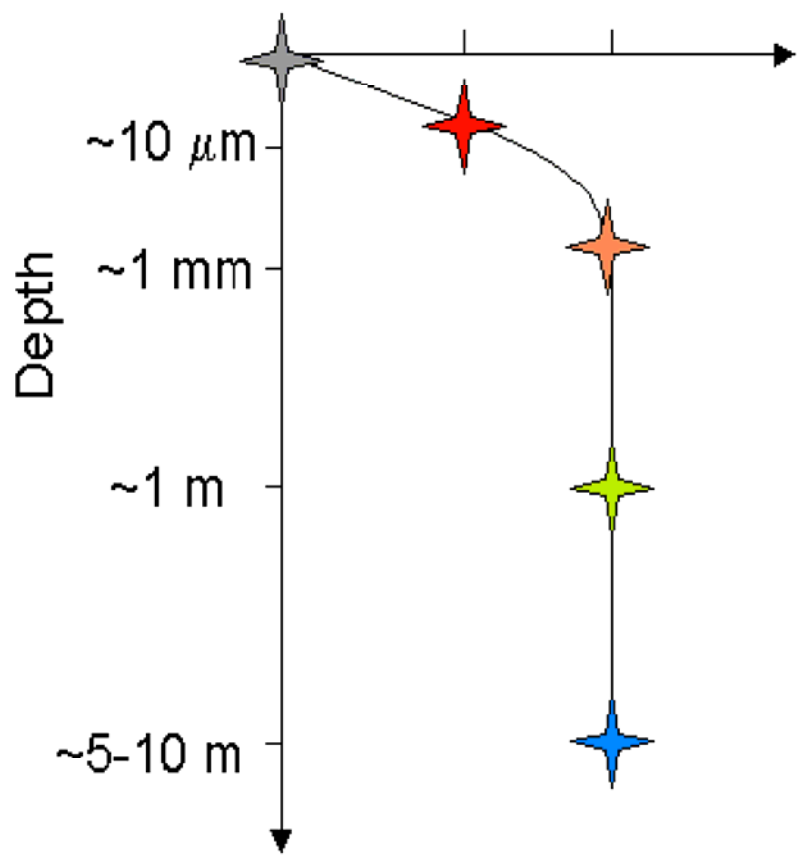

- heat transport processes
- time scale of variability

Craig Donlon – GHRSSST

# Arabian Sea WHOI Mooring Data - Spring 1995

(1mm data estimated using *Fairall et al. (1996)*)

Temperature (°C)

(From the work of A. Stuart-Menteth)

# Tropical Cyclones - Don Gray

- Large values of low level vorticity
- Near equatorial location
- Weak vertical shear in the horizontal wind
- SST  $\geq 26$  °C & deep thermocline
- Conditional instability through a deep layer of the atmosphere
- High humidity in the lower and middle atmosphere

# Observational Surrogates

- SST is (almost) OK – deep thermocline?  
ARGO floats - OK
- low level vorticity – scatterometer & MW winds -OK
- conditional instability – convection / cloud development - OK
- low and middle level moisture – OK
- near equatorial location – OK
- weak vertical wind shear – cloud and moisture drift winds

# Tropical Cyclone Tim

# Hamilton Index (HI)

$$HI = \{(a_{wv}) \cdot [(b_{lw}) + (c_{ra}) + (d_{sst})] \cdot (e_{ws})\}$$

where:

*a, b, c, d* and *e* are weighing factors that are assigned based on case studies ,

*wv* = water vapour (mm),

*lw* = liquid water (mm),

*ra* = rainfall (mm.hr<sup>-1</sup>),

*sst* = sea surface temperature (°C), and

*ws* = surface wind speed (ms<sup>-1</sup>).

Score	W V mm	LW mm	RA mm hr <sup>-1</sup>	WS ms <sup>-1</sup>	SST °C
0.5	≤45	0	0	≤5	≤27
1.0	≤ 55	≤1.0	≤5	≤10	≤28
2.0	≤65	≤2.0	≤15	≤15	≤29
3.0	≤74	≤3.6	≤24	≤17.4	≤30
4.0	≥ 75	≥ 3.7	≥25	≥17.5	≥31

Lookup table for parameter scores for use in HI

## Hamilton Index

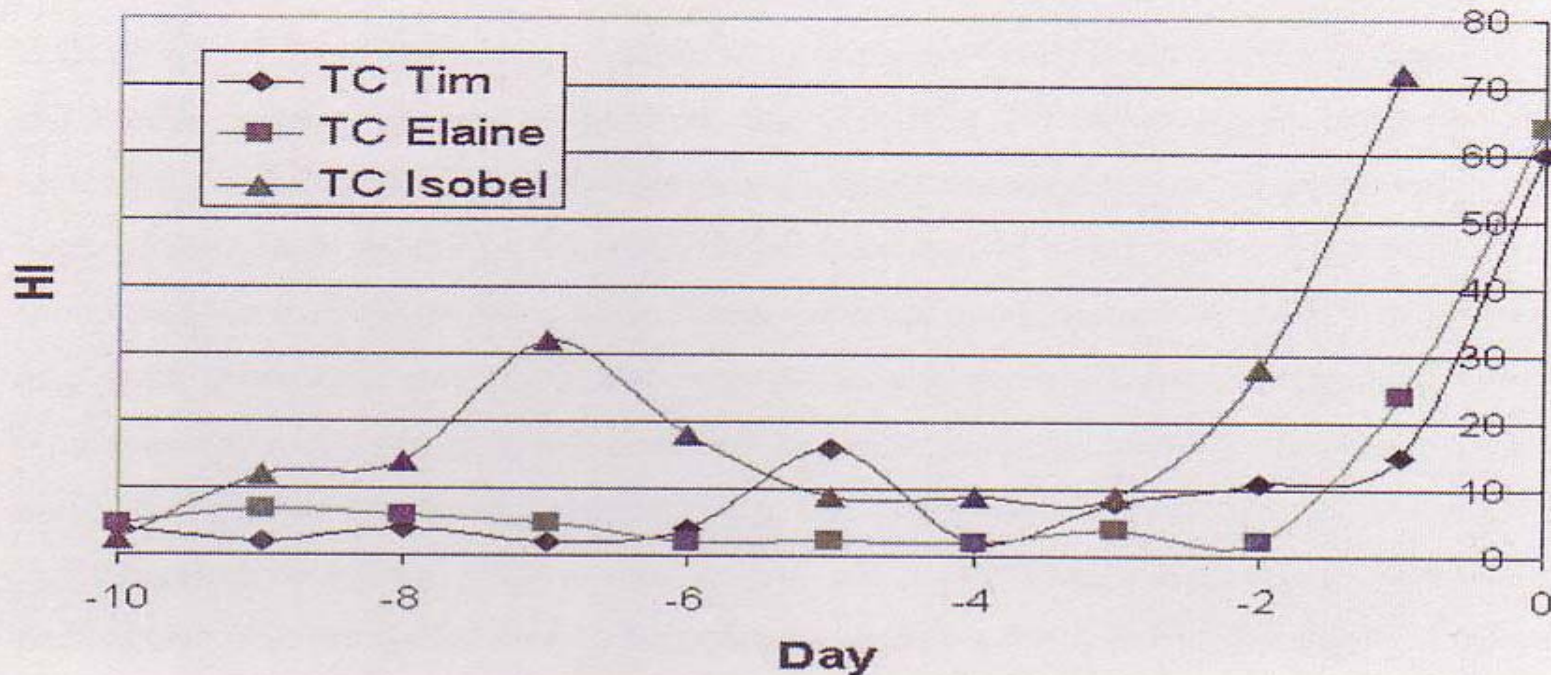

Figure 8.26. The Hamilton Index applied to the daily data from each of the case studies used in this thesis.

**The Hamilton Index applied to daily satellite data for the 3 tropical cyclone case studies investigated.**

# Hamilton Index

- Index range:  $0.38 \leq HI \leq 192$
- Needs tuning with more case studies
- Need to capture other data sets – Quikscat, wind shear, MODIS, ..
- Need grid computing approach with appropriate middleware

# Acknowledgements

- CIMSS network - especially Paul Menzel, Bill Smith, Liam Gumley, Hank Revercomb, Bob Knuteson, Ralph Dedecker
- Greg Hamiltion – data sets

The End
