

Instruction for running RTTOV on modified IMAPP VA

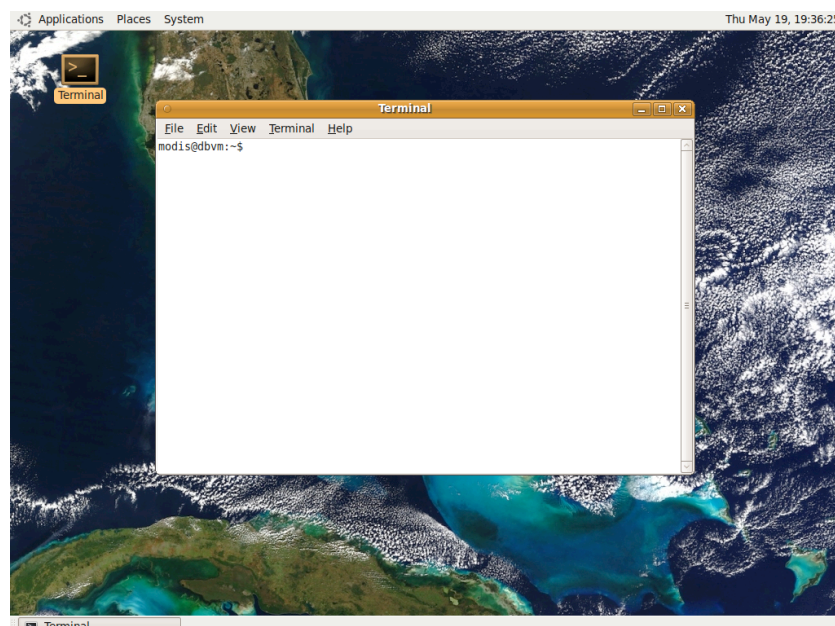

19 May 2011

Willem.Marais@ssec.wisc.edu

1. Double click on “VMWare Player”.
2. On the left side bar of “VMWare Player”, double click on “imapp_va”. This will start the IMAPP Virtual Appliance (VA). A window will appear which will look very similar to the following image:

4. Open a terminal by double clicking on the “Terminal” icon on the top left hand corner of the desktop. The following image shows an example of an opened terminal:

5. The RTTOV software is installed under the user home directory. Doing a listing of the home directory, will show the following:

```
Terminal
File Edit View Terminal Help
modis@dbvm:~$ ls
dbvm          dbvm_v1.1.tar.gz  print.dat  Temp  wallpaper
dbvm_test.bash Desktop          rttov10   test
modis@dbvm:~$
```

6. The RTTOV exercise is in the directory “/home/modis/rttov10/exercise”. The following image shows a directory listing of the “exercise” directory:

```
Terminal
File Edit View Terminal Help
modis@dbvm:~/rttov10/exercise$ ls
output  run_example_fwd.sh  sample_data
modis@dbvm:~/rttov10/exercise$
```
