

Memo

August 1, 2006, 2 PM CDT

To: Kim Licitar, National Weather Service Milwaukee/Sullivan
Information Technology Officers of other Marine WFOs

From: Jordan Joel Gerth, Project Maintenance Programmer
Cooperative Institute for Meteorological Satellite Studies

To all affected sites:

Marine National Weather Service Forecast Offices transitioning from Version 1.0 to Version 1.1 of *MODIS Imagery in D-2D* should make the following additional changes during or after those instructions in the feed change notice:

- Remove the separate entry in LDM's pqact.conf file that requests key 7370.
- Edit the HTML file in /awips/fxa/htdocs/dataMon/infoPages named CIMSS_1KM_SST.html to correct the file location for stored netCDF files so that it includes EAST between MODIS and 1KM.

If you have any problems, please contact me.
