# MODIS Land Products

# MODIS Land Products

**MOD 09 - Land Surface Reflectance**

MOD 10 - Snow Cover

**MOD 11 - Land Surface Temperature & Emissivity**

MOD 12 - Land Cover/Land Cover Change

**MOD 13 - Gridded Vegetation Indices (NDVI & EVI)**

**MOD 14 - Thermal Anomalies (Fires)**

MOD 15 - Leaf Area Index & FPAR

MOD 16 - Evapotranspiration

MOD 17 - Net Photosynthesis and Primary Productivity

MOD 29 - Sea Ice Cover

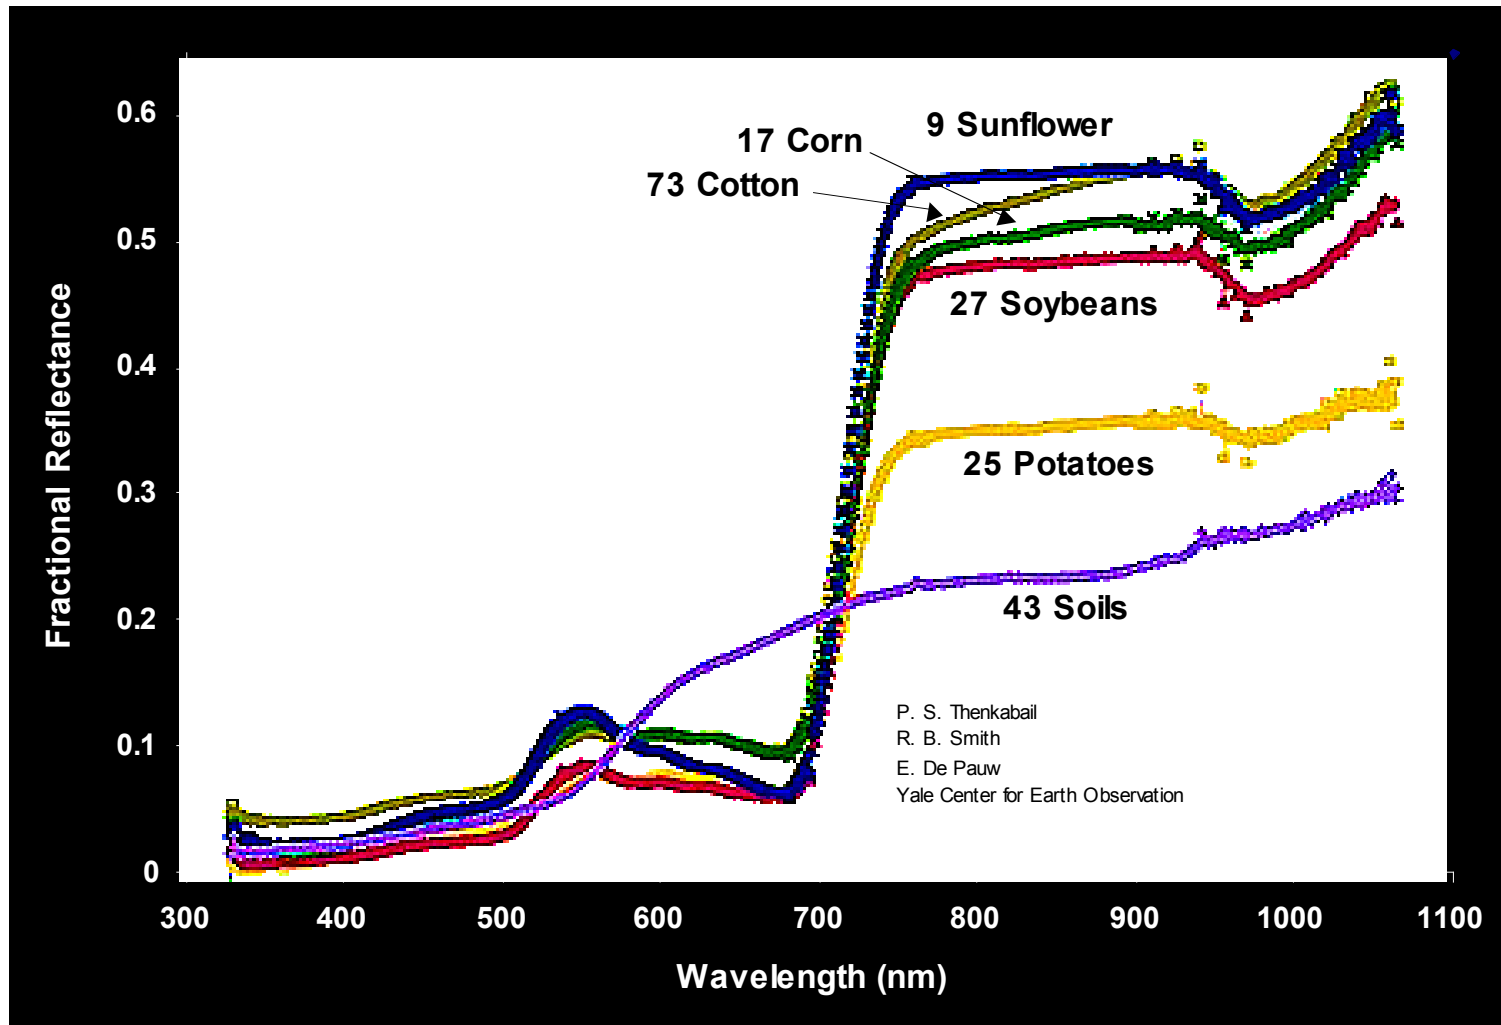

**MOD 43 - Bidirectional Reflectance Distribution Function (BRDF)**

MOD 44 - Vegetation Cover Conversion

# LAND-SOLAR RADIATION

# Soil and crop reflectance

# Normalized Difference Vegetation Index (NDVI)

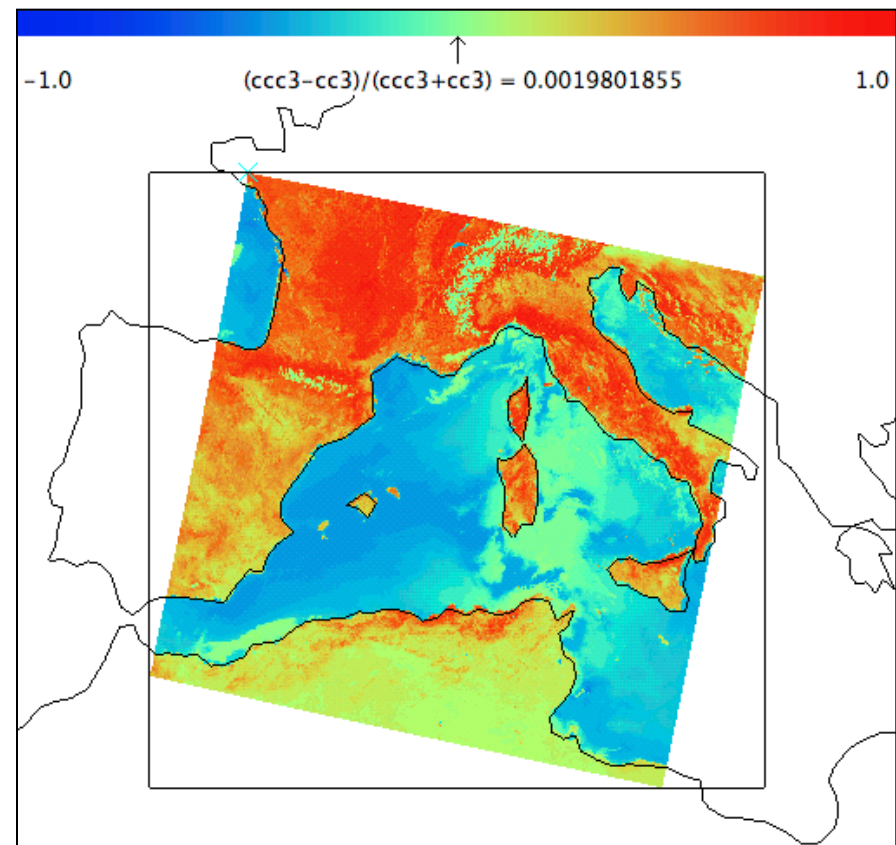

Defined as the ratio  
 $(r_{.86} - r_{.68}) / (r_{.86} + r_{.68})$

## Correlated with:

Plant Biomass	Crop Yield
Plant Nitrogen	Plant Chlorophyll
Water Stress	Plant Diseases
Insect Damage	

## Applications:

Vegetation Monitoring	Agricultural Activities
Drought studies	Landcover Change
Public Health Issues (mosquitos)	Climate Change Detection
Net Primary Production	Carbon Balance

# How does DB VI version differ from the MOD13 product?

- DB VI product uses the corrected reflectance, but not the MODIS surface reflectance MOD09 product
  - Corrected reflectance product removes the effects of the small particle scattering (Rayleigh scattering), but not the Mie scattering (includes aerosols)
  - NASA VI product (MOD13) uses the BRDF (Bidirectional Reflectance Distribution Function) product as input

# Surface Reflectance (MOD09)

The surface reflectance product is defined as the reflectance that would be measured at the land surface if there were no atmosphere.

# Surface Reflectance

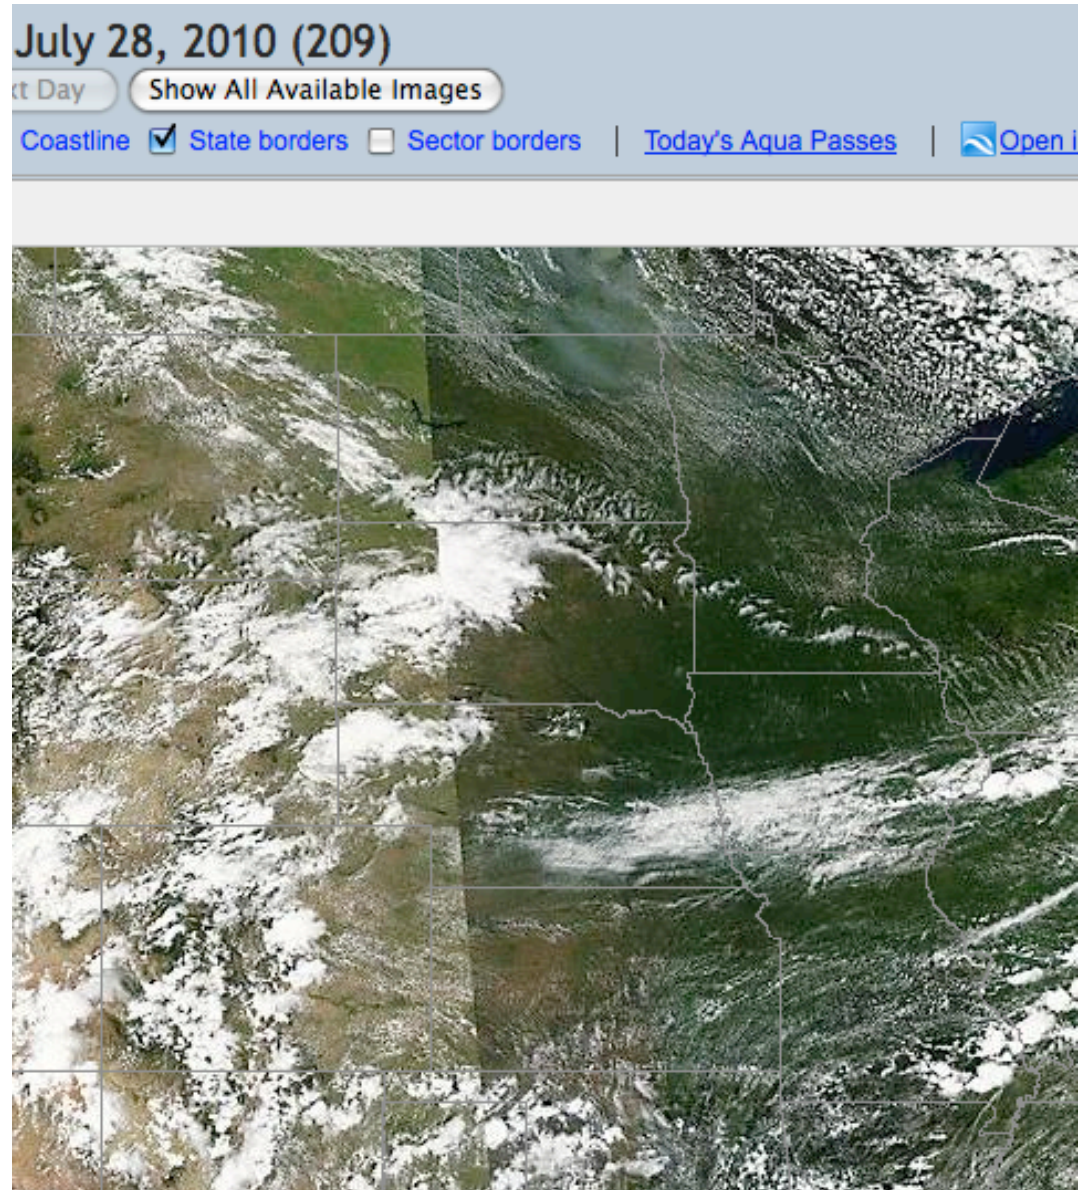

$$\rho_{\text{TOA}} = T_g(\text{O}_3, \text{O}_2, \text{CO}_2) \left[ \rho_R + (\rho_{\text{R+A}} - \rho_R) T_g(U_{\text{H}_2\text{O}}/2) \right. \\ \left. + T_{\text{R+A}} \frac{\rho_s}{1 - \rho_s S_{\text{R+A}}} T_g(U_{\text{H}_2\text{O}}) \right] \quad ($$

$\rho_{\text{TOA}}$  is the reflectance observed at the top of the atmosphere,  
 $T_g$  refers to gaseous transmission,  
 $\rho_R$  is the molecular scattering intrinsic reflectance,  
 $\rho_{\text{R+A}}$  is the intrinsic reflectance of the molecules and aerosols,  
 $T_{\text{R+A}}$  is the transmission of the molecules and aerosols and  
 $S_{\text{R+A}}$  is the spherical albedo.

# Example from MODIS Today web site

The effects of atmospheric and surface reflection are not uniform across a scan

This will affect your retrievals

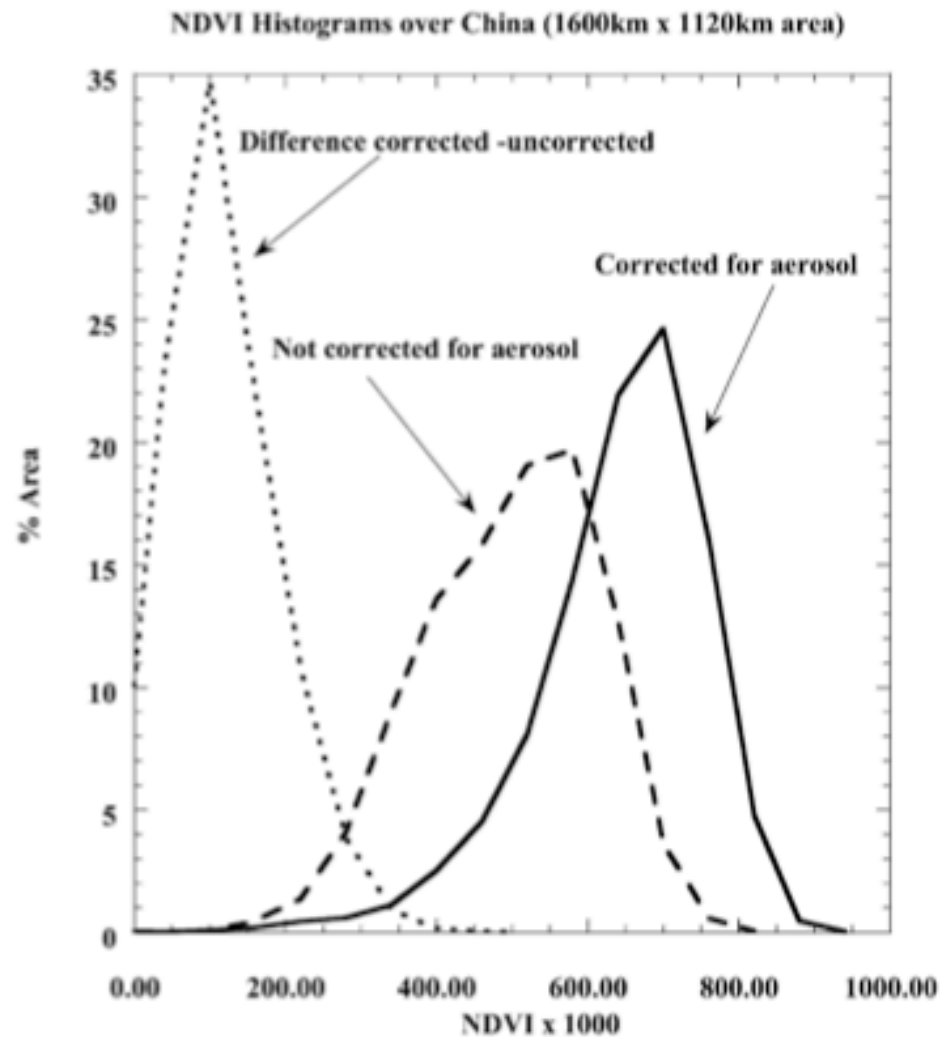

# BRDF (Bi-directional Reflectance Distribution Function)

Black spruce forest in Canada.

**Left**, sun behind camera

**Right**, sun opposite

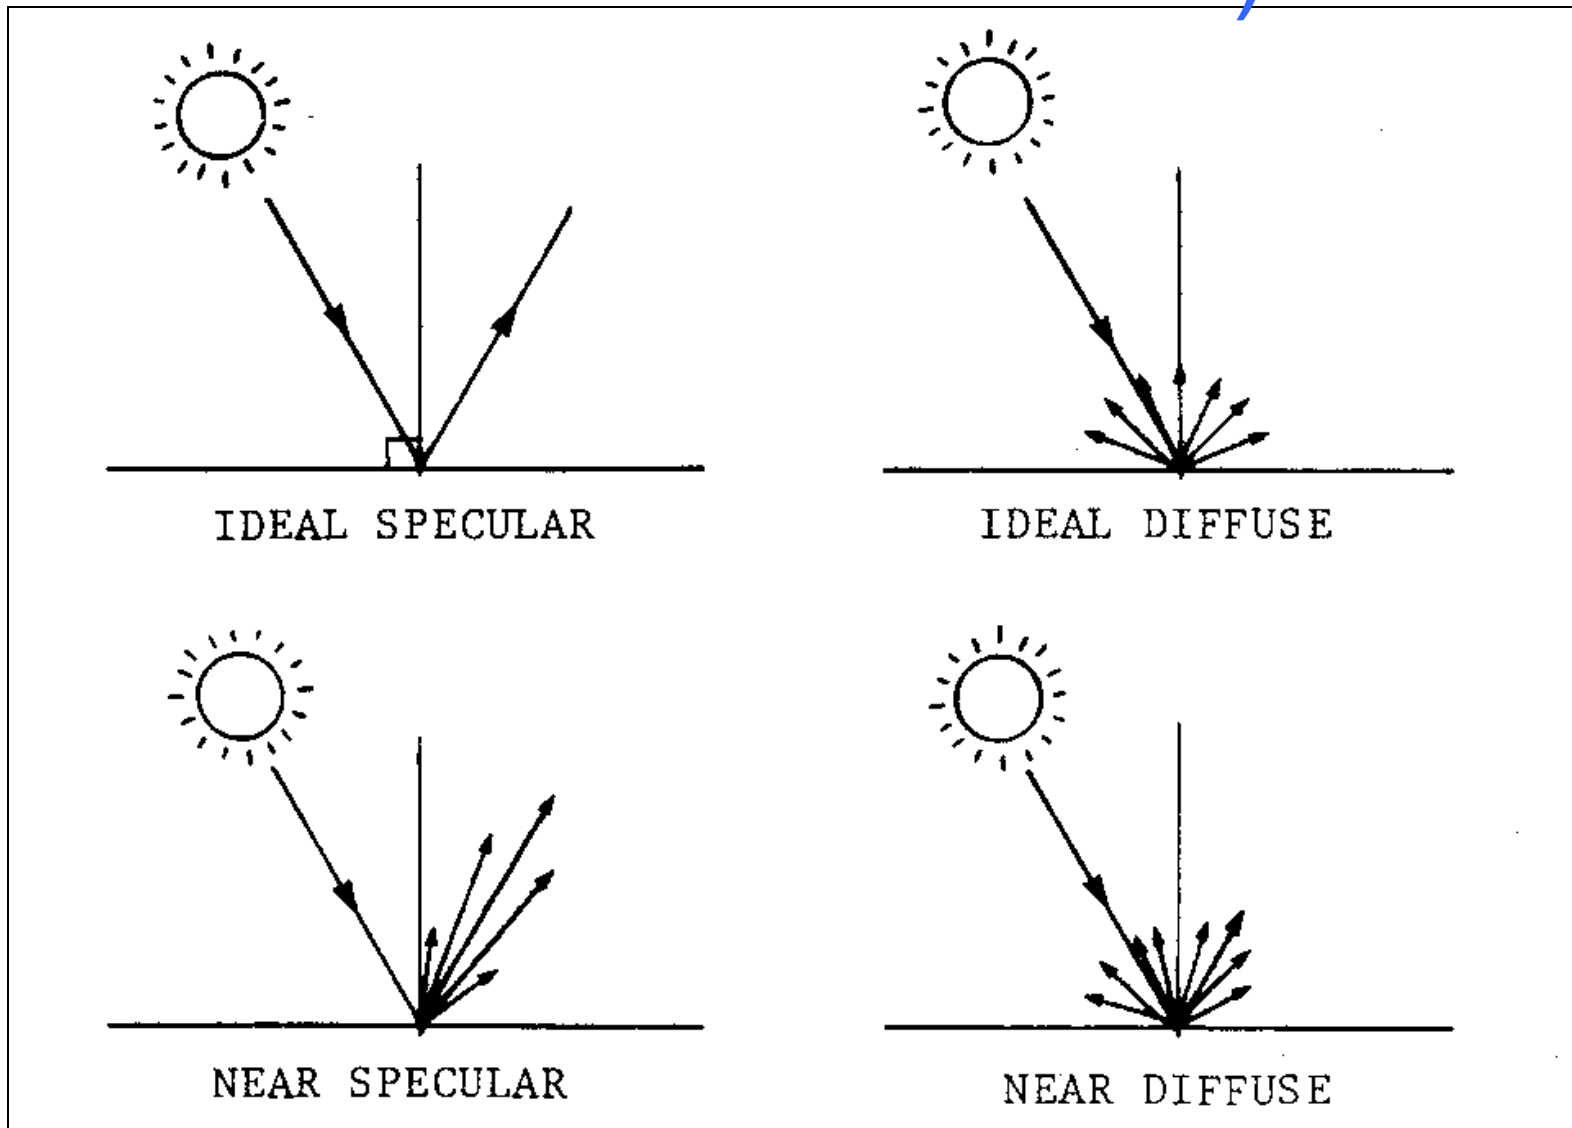

Importance of aerosol correction when retrieving NDVI (Example over China)

Fig. 4. Comparison of histograms of NDVI (corrected for aerosol and uncorrected for aerosol) observed over China (area of  $1600 \times 1120$  km), the solid curve corresponds to the aerosol corrected data, the dashed one to the uncorrected and the small dash to the difference between uncorrected and corrected NDVI.

## Hail Scars Visible On Satellite Imagery

On Friday July 24, 2009, multiple significant hail storms moved southeastward across northeast Iowa, southwest Wisconsin, and northwest Illinois. These hail storms produced extremely large hail, and copious amounts of hail, which led to some concentrated swaths of damage to vegetation. In some areas, most of the crops were severely damaged or destroyed. For a complete write-up on the situation, [click here](#).

With a relatively clear day today, some of the scarring is visible on satellite images. First, the MODIS Vegetation Index which is a 1km resolution product designed to pick up on areas of greenness in the vegetation:

A minimum of about 28% greenness is evident just south-southeast of Belmont, which is not surprising given that is where some of the worst crop damage was observed. Corn stalks were completely stripped and sheared off to a height of less than 2 feet. These damaged areas of vegetation now absorb more radiation from the sun, thereby allowing the surface to heat faster. This phenomenon is evident in the MODIS 250m resolution satellite image from below. Cumulus clouds fired in greater abundance on the Wisconsin hail swaths, which makes them less distinguishable than the Iowa hail swath.

The below image is from a few days later, a little earlier in the day so fewer cumulus clouds. The hail scars are more clearly visible over southwest Wisconsin as well as in northeast Iowa.

# Outline

1. What is MODIS **Direct Broadcast** (DB)?
2. MODIS DB **Image** Products
3. MODIS DB **Atmosphere** Products
4. MODIS DB **Land** products
5. MODIS DB **Ocean** products
6. Software for **interpreting** MODIS DB products
7. **Downloading** MODIS data from the Web

# What is Direct Broadcast?

- Direct Broadcast is the real-time transmission of earth observation data from the spacecraft to the ground (via X-band on Terra and Aqua)
- On Terra, only MODIS is broadcast
- On Aqua, all data is broadcast
- Data are free and clear with no encryption
- All you need is an antenna and receiver!
- “Terra and Aqua are a great gift to the world” (*Vladimir Gershenzon, ScanEx*)

# Terra

Launched: Dec. 18, 1999

10:30 am descending

ASTER: Hi-res imager  
CERES: Broadband scanner  
MISR: Multi-angle imager  
**MODIS: Multispectral imager**  
MOPITT: Limb sounder

**Only MODIS is available by DB**

# Aqua

Launched: May 4, 2002

1:30 pm ascending

- AIRS: Infrared sounder
- AMSR-E: Microwave scanner
- AMSU: Microwave scanner
- CERES: Broadband scanner
- HSB: Microwave sounder
- MODIS: Multispectral imager**

**All sensors are available via DB**

# How do I get Direct Broadcast?

- Direct Broadcast X-band ground stations are available from a number of vendors
- Cost is around \$100-300K USD
- There are many other stations around the world

*There are other ways to get MODIS data...*

Shanghai, China

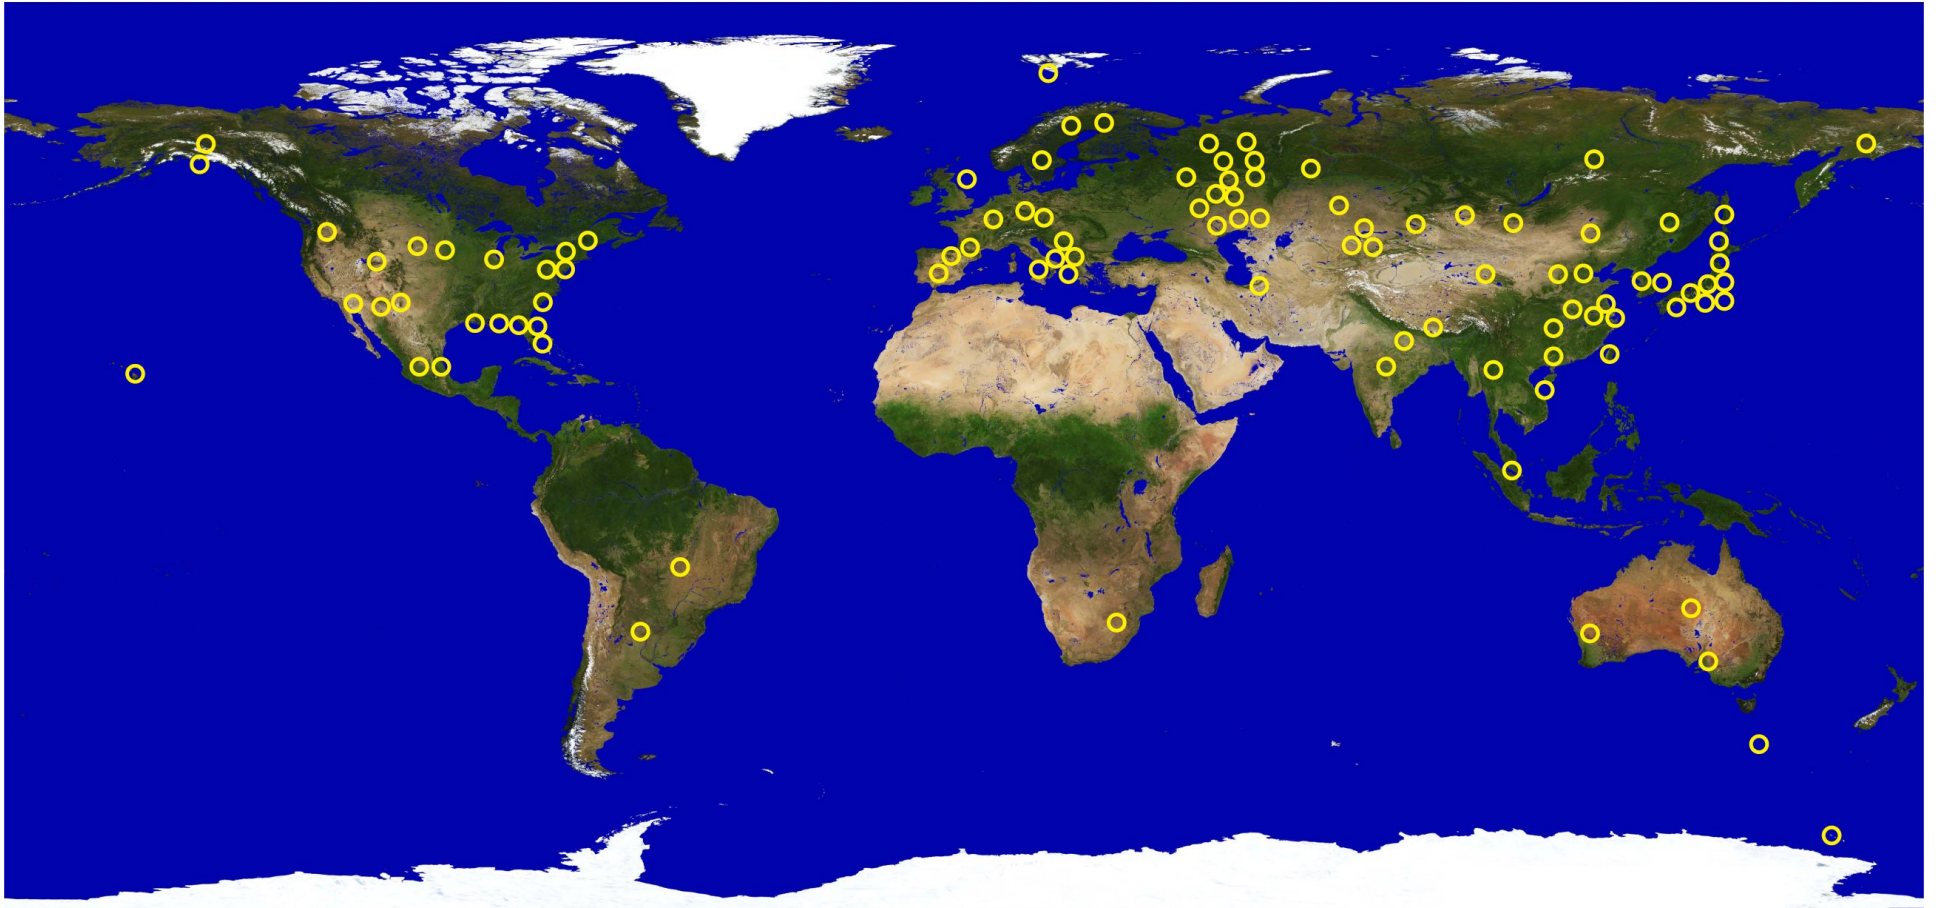

Moscow, Russia

Madison, USA

Benevento, Italy

# EOS Direct Broadcast Sites Worldwide

# DB Coverage from Madison, WI

Terra, 2009/07/05

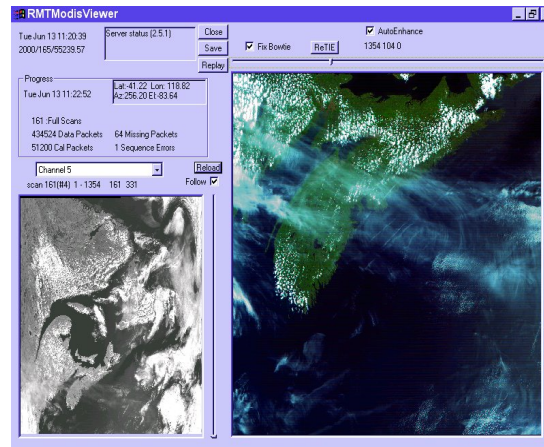

# Advantages of DB

Satellite

Ground Station

Processing Software

Products and Applications

- Local control gives users the freedom to tailor operations to suit local needs
- Timeliness for responding to natural hazards and providing information for decision makers
- Local researchers are free to develop and refine algorithms tuned for local conditions

## MODISL1DB 1.7 (Released January 5, 2011)

---

**MODISL1DB** is a MODIS Level-1 Direct Broadcast software package capable of processing MODIS Aqua and Terra Level 0 data to Level 1A and Level 1B.

This software is a culmination of various efforts made by the **MODIS Science and Calibration Teams**, including the latest processing source codes from the **MODIS Science Data Support Team (SDST)**, the **MODIS Characterization Support Team (MCST)**, and the **Ocean Biology Processing Group (OBPG)**. Thanks also goes out to **SSEC** for continued support.

Processing MODIS data with MODISL1DB will result in identical products to those produced by the OBPG if the same calibration LUTs are used.

Notable changes in this release are:

- Updated to the l1agen and geogen programs
- Added 64bit Linux support
- Processing scripts have been modified:
  - modis\_L0\_to\_L1A\_GEO.csh -> modis\_L1A.csh (GEO creation removed)
  - modis\_L1A\_to\_GEO.csh -> modis\_GEO.csh
  - modis\_L1A\_to\_L1B.csh -> modis\_L1B.csh

**For more details see the [Version History](#).**

The main MODISL1DB user support medium is the **MODIS Direct Broadcast Support Forum** (one of the **Ocean Color Forums**). If you would like to contact us directly, please feel free to send questions or comments to **seadas at seadas.gsfc.nasa.gov**.

# **What does MODISL1DB do?**

**Purpose: Convert raw MODIS telemetry files to calibrated and geolocated Level 1B image products**

**Input Data: Level 0 CCSDS Packet Files containing APID 64 (MODIS) for Terra and Aqua; and APID 957 (GBAD) for Aqua**

**Output Data: MODIS Level 1B 1KM, HKM, QKM, and Geolocation (HDF4 format)**

# MODIS Level 1B Data

- MODIS Level 1B data contains calibrated and geolocated radiance or reflectance values observed by the instrument (top of atmosphere)
- MYD02 is the Aqua product ID (Terra=MOD02)
- MYD021KM = 1000 meter resolution  
(1354 pixels across track by 2030 pixels along track for a standard 5-minute granule or scene)
- MYD02HKM = 500 meter resolution (2708 x 4060)
- MYD02QKM = 250 meter resolution (5416 x 8120)

*DB granules may be larger (up to 14 minutes long)*

# MODIS Level 1B Contents

- Format is Hierarchical Data Format v4 (HDF4)
- Image data are stored as scaled integers, with linear slope and intercept to convert to calibrated radiance or reflectance
- Geolocation data at 1000 meter resolution are stored in a separate file (MYD03), along with sensor viewing geometry and solar geometry
- Daytime 1KM granules contain all 36 bands at 1000 meter resolution
- Nighttime 1KM granules contain bands 20-36 only
- HKM and QKM granules are daytime only

# MODIS Band 31, Acquired by four different DB ground stations

The International MODIS/AIRS Processing Package (IMAPP) allows ground stations capable of receiving direct broadcast data from the NASA [Terra](#) and [Aqua](#) spacecraft to create a suite of products from [MODIS](#), [AIRS](#), [AMSU](#), and [AMSR-E](#). The IMAPP software is freely available, and is supported on Intel Linux host platforms.

IMAPP is also available as a Virtual Appliance for Windows, OS X, and Linux, offering a complete processing system for direct broadcast atmosphere, land, and ocean products from Terra and Aqua.

**MODIS products (Terra and Aqua)**

Atmosphere Products

- Cloud mask
- Cloud top pressure and temperature
- Cloud optical depth and effective radius
- Temperature and moisture profiles

**Virtual Appliance**

The IMAPP Virtual Appliance is an automated processing system for MODIS, AIRS, and AMSR-E data acquired by direct

**What's New**

- [MODIS Infrared Band Destriping Software Version 1.1](#)
- [IMAPP Virtual Appliance Version 1.1](#)
- [AIRS L1B HDFEOS TO BUFR Software Version 1.2](#)

# IMAPP Product List

## **MODIS Products:**

- Cloud Mask (MOD35)
- Cloud Top Properties (MOD06CT)
- Atmospheric Profiles (MOD09)
- Aerosol Optical Depth (MOD04)
- Sea Surface Temperature
- Near Infrared Water Vapor
- Level 1B Destriping
- True Color Images for Google Earth
- Nadir BRDF Adjusted Reflectance

## **Other Products:**

- AIRS/AMSU Level 1B Calibrated And Geolocated Radiances
- AIRS/AMSU JPL Atmospheric Profiles
- AIRS UW Single FOV Atmospheric Profiles (Clear Sky Only)
- AIRS/MODIS Single FOV Atmospheric Profiles (Clear and Cloudy)
- AMSR-E Level 2 Geophysical Products
- AMSR-E Snow Water Equivalent
- DBCRA Numerical Weather Prediction Model

# What does IMAPP do?

**Purpose: Creates MODIS atmosphere, utility, and image products (and AIRS, AMSU, AMSR-E)**

**Input Data: MODIS Level 1B 1KM, HKM, QKM, and Geolocation (HDF4 format)**

**Output Data: MODIS Level 2 Cloud Mask, Cloud Top Properties, Atmospheric Temperature and Water Vapor Profiles, Total Ozone, Total Precipitable Water Vapor (HDF4 format)**

# MODIS Atmosphere Products

2011/09/11 03:25

## Cloud Mask

## Water Vapor

# DBCRAAS NWP Model

- Easy to install and easy to execute on modest PCs
- NWP domain centered on your DB location
- Assimilates IMAPP MOD07 TPW and MOD06CT Cloud Top Pressure and Cloud Effective Emissivity in order to adjust the cloud and moisture fields in the GFS.
- Output is standard meteorological parameters in GRIB2
- Creates forecast satellite imagery

72 hour forecast of 11 micron  
brightness temperature  
(3 hour time step)

## Level 1B 1KM Destriping

- Removes stripes from 1KM thermal infrared bands
- Each detector is adjusted to match a reference detector
- Destriping is recommended before creating IMAPP Atmosphere Products (e.g., Cloud Mask)

Terra MODIS L1B 1KM, 2003094 06:05, Band 29

# True Color Images for Google Earth

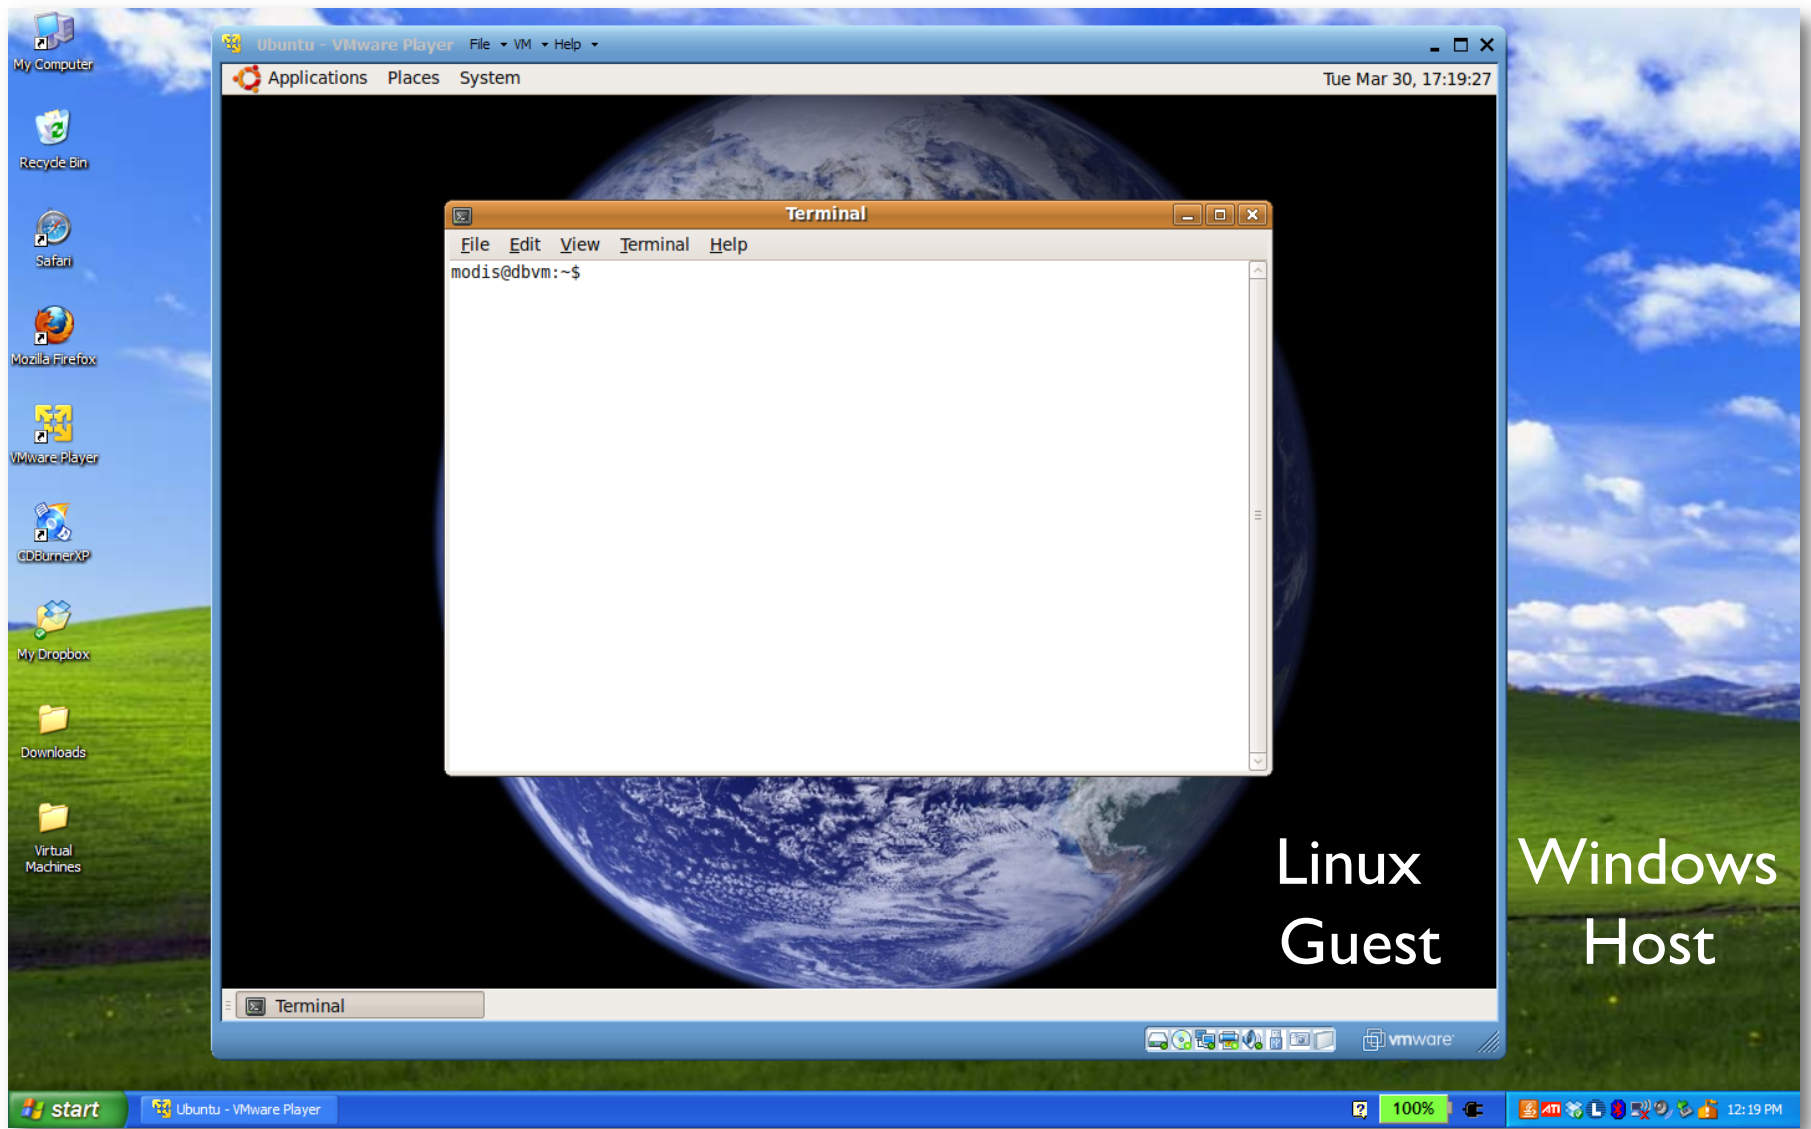

Images can be ready within 30 minutes of acquisition

# IMAPP Virtual Appliance

The IMAPP VA makes it simple to install and run a DB processing system to create a range of atmosphere, land, and ocean products from the MODIS sensor onboard Terra and Aqua, and the AIRS, AMSU, and AMSR-E sensors onboard Aqua.

- Supports Windows (XP, Vista, 7), Apple OS X, Linux
- Install and run within 10 minutes
- Easy to configure (e.g., turn on MODIS Land, turn off AIRS)
- Easy to maintain (automated lookup table updates)
- Designed for simplicity (no DBMS, no Java, no COTS; just Bash scripts)
- Allow reliable automated processing
- Use only open source software packages (e.g., IMAPP, SeaDAS, etc.)
- Software package downloads are automated as part of the install process
- Easy to add user-created processing software

Linux  
Guest

Windows  
Host

# IMAPP VA Installation (Windows)

1. Download and run IMAPP VA self-extracting archive
2. Download and install VMware Player (free)
3. Start VMware Player and select IMAPP VA

MODIS Level 1 and Atmosphere processing packages are pre-installed.

Other packages can be added by editing a configuration file, and running an installer script.

***Version 1.1 is now available on the IMAPP website***

## Land Surface Temperature

## Vegetation Index

# Land Surface Reflectance

MODIS Land Surface Reflectance Algorithm (MOD09) code was adapted for DB by Eric Vermote and Jim Ray. Standard HDF4 format with metadata is created.

Changes for DB included:

- Code pre-compiled for 32-bit Intel Linux; source code is also available
- Handles arbitrary granule sizes
- Able to use NCEP GFS forecast data instead of NCEP GDAS analysis data
- Automatically discovers and downloads required ancillary data at runtime
- Handles bad geolocation data
- Night granules are handled gracefully in wrapper script

MOD09 True Color  
Aqua DB

# MODIS BRDF

- MOD43B4 Nadir BRDF-Adjusted Reflectance (NBAR) Product is computed for MODIS spectral bands (1-7) at the mean solar zenith angle of each 16 day period.
- View angle effects are removed from the directional reflectances.
- Applications include vegetation indices, land cover change, and burned area mapping.

16-day Composite from DB NBAR Algorithm (True Color)  
visualized by HDFLook

## What is SeaDAS

The SeaWiFS Data Analysis System (SeaDAS) is a comprehensive image analysis package for the processing, display, analysis, and quality control of ocean color data.

Supported satellite sensors are [MODIS](#), [SeaWiFS](#), [OCTS](#), and [CZCS](#).

## What's New

### SeaDAS Virtual Appliance released for Windows!

SeaDAS VA 5.4 allows SeaDAS to be run on Microsoft Windows XP and Vista systems within a virtual Linux machine.

This is a fully functional version of SeaDAS and processing benchmarks show very impressive performance.

SeaDAS VA is simple to install and requires the free [VMware Player](#).

### User Contributed Software

Do you have programs to share?

# What does SeaDAS do?

**Purpose: Creates standard ocean color and ocean temperature products. Allows interactive display and analysis of ocean products.**

**Input Data: MODIS Level 1B 1KM, HKM, QKM, and Geolocation (HDF4 format)**

**Output Data: MODIS Level 2 Water Leaving Radiance, Chlorophyll concentration, Sea Surface Temperature (HDF4 format)**

## SeaDAS Standard Products

<b>Geophysical Parameter Name</b>	<b>Description</b>
nLw_412	Normalized water-leaving radiance at 412 nm
nLw_443	Normalized water-leaving radiance at 443 nm
nLw_488	Normalized water-leaving radiance at 488 nm
nLw_531	Normalized water-leaving radiance at 531 nm
nLw_551	Normalized water-leaving radiance at 551 nm
nLw_667	Normalized water-leaving radiance at 667 nm
Tau_869	Aerosol optical thickness at 869 nm
Eps_78	Epsilon of aerosol correction at 748 and 869 nm
Chlor_a	OC3 Chlorophyll a concentration
K490	Diffuse attenuation coefficient at 490nm
Angstrom_531	Angstrom coefficient, 531-869 nm
SST	Sea Surface Temperature: 11 micron
SST4	Sea Surface Temperature: 4 micron (night only)

# Outline

1. What is MODIS **Direct Broadcast (DB)**?
2. MODIS DB **Image** Products
3. MODIS DB **Atmosphere** Products
4. MODIS DB **Land** products
5. MODIS DB **Ocean** products
6. Software for **interpreting** MODIS DB products
7. **Downloading** MODIS data from the Web

# Software for Interpreting DB Products

- MODIS products are stored in a specialized format named Hierarchical Data Format (HDF) version 4.
- Some of the MODIS products (e.g., Level 1B) have complex internal structures
- Specialized software is required to read and interpret the HDF4 format correctly
- Software is designed for (a) Interactive Display, (b) Quantitative Analysis, or (c) Both
- Software is either (a) Free; or (b) Expensive

# Software from Univ. of Wisconsin

- **Hydra** is a free application for MODIS, AIRS, and SEVIRI data exploration in classroom settings
  - <http://www.ssec.wisc.edu/hydra/>
- **Mc-LITE** is a free application for automated generation of MODIS image products (available as an add-on to IMAPP)
- **McIDAS-V** is a free application for interactively exploring MODIS and many other satellite and meteorological data products
  - <http://www.ssec.wisc.edu/mcidas/software/v/>

# Free Software

- **MRTSwath** is a Linux application for reprojecting MODIS Level 1B and Level 2 products to a map grid (removes bowtie artifacts)
- **HDFLook** is a Linux application for interactive and automated display and reprojection of MODIS Level 1B and Level 2 products
- **MS2GT** is a Linux application for reprojecting MODIS Level 1B data and any other satellite imager data (AVHRR, MERSI, VIIRS)

*Just Google the names...*

# Commercial Software

- **ENVI** is a Windows/Linux/OSX application interactive display and analysis of many satellite products, including MODIS Level 1B and Level 2
- **IDL and Matlab** are Windows/Linux/OSX interactive programming environments for quantitative analysis, and they can read MODIS Level 1B and Level 2 products in HDF4 format

*Just Google the names...*

# HDF4 Application Programming Interface (API)

- The HDF4 API is available for C, C++, FORTRAN-90, Java, and Python
- Documentation, binaries, and source code are available

<http://www.hdfgroup.org/>

# Outline

1. What is MODIS **Direct Broadcast (DB)**?
2. MODIS DB **Image** Products
3. MODIS DB **Atmosphere** Products
4. MODIS DB **Land** products
5. MODIS DB **Ocean** products
6. Software for **interpreting** MODIS DB products
- 7. Downloading** MODIS data from the Web

# MODIS Products from NASA

NASA provides MODIS Level 0, Level 1B, Land, Ocean and Atmosphere Products at no cost

Global near real-time products (about 90-120 minutes delay) are available from LANCE

Best for obtaining products in real-time; regional subscriptions are available.

Global long-term archive products (about 24 hours delay) are available from LAADS

Best for obtaining long-term historical data.

Data Products

The following tables lists all products produced by LANCE-MODIS. The table provides links to the FTP site for each product and to browse data, if available. The latency figures were measured for data days 2010-11-04 through 2010-11-10 under normal processing conditions. The latency values in parentheses in the Average latency column are the typical values for the standard MODIS production system.

The following links provide additional information about the products.

- [Comparison of Standard and NRT Products](#)
- [Operational PGE Versions](#)

Please note that we have added "NRT" to the file names in order to distinguish the NRT products from our standard products.

### Terra / MODIS

Product	FTP (register for access)	Volume (GB/day)	Browse	Known Issues	PGE	Latency (h:mm)		
						Min	Avg	Max
Spacecraft Ephemeris Data	<a href="#">AM1EPHN0</a>	N/A	N/A	N/A	N/A	N/A		
Extrapolated Orbital Data	<a href="#">AM1EPHNE</a>	N/A	N/A	N/A	97	N/A		
L0 PDS Data, Session- Based	<a href="#">MOD00S</a>	N/A	N/A	N/A	N/A	N/A		
L0 PDS Data, 5-Min Swath	<a href="#">MOD00F</a>	N/A	N/A	N/A	95	0:14	1:07	2:51
L1A Raw Radiances, 5-Min Swath	<a href="#">MOD01</a>	N/A	N/A	N/A	01	0:20	1:14	2:58
Geolocation, 5-Min Swath 1km	<a href="#">MOD03</a>	N/A				0:20	1:14	2:58

# What Does the Future Hold?

Based on spacecraft fuel reserves, Terra and Aqua are expected to last until at least 2015.

NPOESS Preparatory Project (NPP) is a NASA mission scheduled to launch in October 2011 (afternoon orbit).

Joint Polar Satellite System (JPSS) is the successor to the canceled NPOESS program, and JPSS-1 (a clone of NPP) is planned to launch in 2014.

# NPP Sensors

VIIRS – Medium Resolution  
Visible & Infra-red Imager

CrIS – Fourier Transform  
Spectrometer for IR  
Temperature and Moisture  
sounding

ATMS – Microwave sounding  
radiometer

OMPS – Total Ozone Mapping  
and Ozone Profile  
measurements

CERES - Earth Radiation Budget

NPP at Ball Aerospace  
July 2010

# VIIRS Spectral Bands

	Band No.	Wave-length (µm)	Horiz Sample Interval (km Downtrack x Crosstrack)		Driving EDRs	Radiance Range	Ltyp or Ttyp	Signal to Noise Ratio (dimensionless) or NE <sup>Δ</sup> T (Kelvins)

# MODIS vs. VIIRS

## ***Similarities***

- VIIRS supports all land surface imaging applications of MODIS (NDVI, LST, Burned Area, Snow/Ice, True Color, etc.).
- NPP and JPSS-I will transmit all data to the ground in real-time via X-band direct broadcast (but not L-band).
- Software for real-time processing will be available (SSEC is funded from JPSS Project).

# MODIS vs. VIIRS

## ***Differences***

- VIIRS native resolution is 375 and 750 meters (vs. 250 and 1000 meters for MODIS).
- VIIRS has 22 bands while MODIS has 36 bands.
- VIIRS has constant pixel size across the scan.
- VIIRS data format is HDF5.
- Redundant “bow-tie” pixels on VIIRS are not transmitted to the ground.

Aqua MODIS, 19 June 2010
